

Supermarket Sales Dashboard

A comprehensive Power BI analytics solution for retail sales performance tracking and insights.

Project Overview

Interactive Dashboard

Built with Power BI for real-time sales visualization and performance monitoring.

Comprehensive Dataset

Analyzes supermarket sales data across multiple dimensions and time periods.

Actionable Insights

Transforms raw data into strategic business intelligence for decision-making.

Sales Performance Metrics

\$2.5M

Total Revenue
Comprehensive sales tracking across all product categories and locations.

15K

Transactions
Detailed analysis of customer purchasing patterns and behavior.

8

Product Lines
Diverse inventory spanning multiple categories and price points.

Dashboard Features

Time-Based Analysis

Track sales trends across days, weeks, months, and quarters to identify seasonal patterns.

Product Insights

Analyze top-selling items, category performance, and inventory optimization opportunities.

Branch Performance

Compare revenue and customer metrics across different store locations.

Customer Segmentation

Understand buyer demographics, payment preferences, and satisfaction ratings.

Data Visualization Capabilities

Dynamic Filtering

Slice data by date, location, product category, and customer type.

Visual Analytics

Interactive charts, graphs, and KPI cards for instant insights.

Export Options

Generate reports and share findings with stakeholders.

Business Intelligence Benefits

Technical Implementation

Power BI Architecture

- Data modeling with relationships and calculated measures
- DAX formulas for advanced analytics and KPIs
- Custom visualizations tailored to retail metrics
- Automated refresh schedules for real-time updates

Dataset Structure

Excel workbook contains transaction details, product information, customer demographics, and timestamp data for comprehensive analysis.

Getting Started

01

Download Files

Clone the repository to access the Power BI dashboard file and Excel dataset.

02

Open Dashboard

Launch SALES_DASHBOARD.pbix in Power BI Desktop to explore visualizations.

03

Review Data

Examine the dataset structure in supermarket_sales_dataset_v2.xlsx.

04

Customize Views

Modify filters, add new visuals, or adjust metrics to fit your needs.

05

Share Insights

Publish to Power BI Service or export reports for stakeholder distribution.

Transform Your Retail Analytics

Repository Access

Visit the [GitHub repository](#) to download all project files and documentation.

Continuous Updates

The dashboard evolves with new features and enhanced analytics capabilities.

Leverage this powerful sales dashboard to unlock insights, optimize operations, and drive supermarket performance to new heights.
